

Management's Discussion and Analysis ("MD&A")
for the Six Months Ended May 31, 2018

The following information, prepared as of July 26, 2018, should be read in conjunction with the unaudited condensed interim consolidated financial statements of Search Minerals Inc. (the "Company" or "Search") for the six months ended May 31, 2018, together with the audited consolidated financial statements of the Company for the year ended November 30, 2017 and the accompanying Management's Discussion and Analysis (the "MD&A") for that fiscal year. The referenced unaudited condensed interim consolidated financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"). All amounts are expressed in Canadian dollars unless otherwise indicated.

FORWARD-LOOKING STATEMENTS

Forward-looking statements look into the future and provide an opinion as to the effect of certain events and trends on the business. Forward-looking statements may include words such as "plans", "intends", "anticipates", "should", "estimates", "expects", "believes", "indicates", "suggests" and similar expressions.

This MD&A contains forward-looking statements. These forward-looking statements are based on current expectations and various estimates, factors and assumptions and involve known and unknown risks, uncertainties and other factors. Information concerning mineral resource estimates and the interpretation of drill results may also be considered a forward-looking statement, as such information constitutes a prediction of what mineralization might be found to be present if and when a project is actually developed.

It is important to note the following:

- Unless otherwise indicated, forward-looking statements in this MD&A describe the Company's expectations as of July 26, 2018.
- Readers are cautioned not to place undue reliance on these statements as the Company's actual results, performance or achievements may differ materially from any future results, performance or achievements expressed or implied by such forward-looking statements if known or unknown risks, uncertainties or other factors affect the Company's business, or if the Company's estimates or assumptions prove inaccurate. Therefore, the Company cannot provide any assurance that forward-looking statements will materialize. Factors that could cause results or events to differ materially from current expectations expressed or implied by the forward-looking statements include, but are not limited to, possible variations in mineral resources, labour disputes, operating or capital costs; availability of sufficient financing to fund planned or further required work in a timely manner and on acceptable terms; failure of equipment or processes to operate as anticipated; and political, regulatory, environmental and other risks of the mining industry.
- Subject to applicable laws, the Company assumes no obligation to update or revise any forward-looking statement, whether as a result of new information, future events or any other reason.
- The preliminary economic assessment is preliminary in nature and includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them to enable them to be categorized as mineral reserves and there is no certainty that the preliminary economic assessment will be realized. Mineral resources that are not mineral reserves do not have a demonstrated economic viability

For a description of material factors that could cause the Company's actual results to differ materially from the forward-looking statements in this MD&A, please see "Risks and Uncertainties."

GENERAL

The Company was incorporated on June 7, 2006 under the *Business Corporations Act* of British Columbia and the Company is trading on the TSX Venture Exchange under the symbol "SMY.V."

The Company is focused on creating value through finding and developing "critical rare earth element ("CREE")" mineral assets in SE Labrador, Canada. CREEs (Nd, Pr, Tb, Dy, La) are strategic metals that have growing demand, constrained or restricted supply, and are commonly used in innovative technologies.

Search is the discoverer of the Port Hope Simpson CREE District, a highly prospective CREE belt located in southeast Labrador, where the Company controls a belt 70 km long and up to 8 km wide. Search owns 100% of the advanced CREE resource called the Foxtrot Project ("Foxtrot"), and recently announced Foxtrot-like prospects called "Deep Fox" and "Fox Meadow". In addition, the Company has identified more than 20 other Foxtrot-like prospects in the District. The primary focus of Search is to continue to advance the Foxtrot resource and to produce a resource at Deep Fox, while evaluating other Foxtrot-like prospects. Several of the Foxtrot-like prospects require exploration drilling programs and may provide additional resources to a central processing facility that would be situated within the District.

Search also holds a number of other CREE mineral prospects in Labrador in its portfolio, including claims in the Red Wine Complex and in the Henley Harbour area.

OVERALL PERFORMANCE

Search Minerals' focus is on exploration and development of the Port Hope Simpson Critical Rare Earth Element District in Southeastern Labrador, Canada. The Company seeks to raise funds through conventional raises, and to seek out government assistance or other non-dilutive and alternative financings to advance the Port Hope Simpson REE District.

The completion and success of the pilot plant was a key milestone for Search, as we have proven that our patented Search Direct Extraction Process can process the Foxtrot material and provide a high purity mixed rare earth oxide product. The production of concentrate samples remains crucial for approaching the separation companies and refineries for further processing analysis.

On December 11, 2017 the Company announced that on November 30, 2017, the Canadian Environmental Assessment Agency ("CEAA") determined that the Foxtrot Project meets the definition of a designated project under the Canadian Environmental Assessment Act, 2012 and that the project description submitted by Search meets the requirements of the Prescribed Information for a Description of a Designated Project Regulations. The CEAA will conduct a 45-day review of the Project, which includes a 20-day public comment period on a summary of the Project, to determine whether an environmental assessment of the Project is required. On January 16, 2018 the Company announced that it had received notice from the CEAA confirming that the Foxtrot Project will require an environment assessment. This is a milestone event in the development of the Foxtrot Project. It is expected that the provincial guidelines would augment the CEAA and Search would work with both the Federal and Provincial governments and submit one document for review. On February 14, 2018, Search received notice from the Newfoundland and Labrador government that an Environmental Assessment is also required. On April 20, 2018, the Newfoundland and Labrador government posted the draft guidelines for a 40 day public review process, after which time, the final guidelines will be provided.

On January 15, 2018 the Company announced that three holes had been completed to date and a fourth started but not completed. These drill holes have shown that rare earth element mineralization is apparent and extending to the current maximum intersection depth of 100m. The drill program was suspended due to the onset of severe winter conditions at the Deep Fox drill site in southeastern Labrador. The Company has decided that the balance of the planned drill program will be rescheduled to June 2018 under more favorable working conditions.

On January 15, 2018 the Company announced that the December 2016 Convertible Debenture in the amount of \$120,750 matured on December 29, 2017 and the Debenture Holder agreed to extend the Debenture on the same terms, without penalty or fees, until March 31, 2018. On April 16, 2018, while the debenture is no longer convertible and is now a demand debt obligation of the Company, the Debenture Holder has agreed to forebear calling for repayment of principal and accrued interest for a period of 90 days during which only accrued interest shall be payable. On July 13, 2018, the debenture of \$120,750 was repaid in cash.

On March 5 2018, the Company released assay results from the first three drill holes. (See Deep Fox Drill Program below).

On July 5, 2018, the Company completed a Rights Offering of 15,609,285 units (“Units”) at a price of \$0.04 per Unit for gross proceeds of \$624,372. Each unit is comprised of one common share and one share purchase warrant. Each whole warrant entitles the holder thereof to purchase an additional common share of the Company at \$0.07 per common share up to July 5, 2020. In connection with the Rights Offering, the Company entered into a standby guarantee agreement (the “Standby Guarantee”) with InCoR Holdings Plc. Under the Standby Guarantee, InCoR agreed to subscribe for all Units that were not otherwise purchased by the Company’s shareholders, up to the amount of \$624,372. As compensation for providing the Standby Guarantee, the Company granted InCoR 3,140,988 share purchase warrants. The share purchase warrants are exercisable at a price of \$0.07 per common share up to July 5, 2023.

On July 11, 2018, the Company completed a private placement of 4,887,536 units at a price of \$0.05 per unit for gross proceeds of \$244,377. Each unit is comprised of one common share and one share purchase warrant. Each whole warrant entitles the holder thereof to purchase an additional common share of the Company at \$0.07 per common share up to July 12, 2020.

On July 11, 2018, the Company completed a flow-through private placement of 3,000,000 units at a price of \$0.06 per flow-through unit for gross proceeds of \$180,000. Each whole warrant entitles the holder thereof to purchase an additional common share of the Company at \$0.07 per common share up to July 12, 2020.

On July 13, 2018, the Company announced that it has commenced drilling a 1,500m drill program on its DEEP FOX Critical Rare Earth Element (“CREE”) prospect in SE Labrador. Drilling started on July 6th and a total of 3 drill holes (483m) have been completed to date. Visible CREE mineralization has been observed in all drill holes and the geology appears to follow the Foxtrot exploration model. This program is designed to intersect surface mineralization at the 50m and 100m levels beneath the surface mineralization (see Search Minerals news release Nov. 3, 2017). The Company expects to begin sending the core samples for assays in early August, with an expectation of 4 – 6 weeks for results. Another 4-5 drill holes are planned to complete the 1500m of drilling.

DIRECTOR AND ADVISORY BOARD CHANGES

On February 2, 2018, Roberto Giannetti da Fonseca resigned from the Board of Directors. The current composition of the Board of Directors is: Mr. Greg Andrews, Dr. David Dreisinger, Mr. George Molyviatis, Ms. Jocelyn Bennett and Mr. Leo Power.

OUTLOOK

Search Minerals’ focus is on exploration and development of the Port Hope Simpson Critical Rare Earth Element District in Southeastern Labrador, Canada. This District is road accessible, on tidewater and contains quantities of those elements that are in short supply and considered strategic or critical due to their use in green economy technologies. Based on these attributes, the Company intends to become a competitive, low-cost, environmentally responsible supplier of Critical Rare Earth Elements (“CREE”) to the global marketplace.

To accomplish this Search will leverage its scalable breakthrough Direct Extraction Metallurgical Process (patent pending) and its highly accessible district-scale resources in SE Labrador to attract two important strategic partners; a strategic partner(s) to finance to a bankable feasibility study for development of its FOXTROT Resource, and an offtake partner whose long-term commitments will provide the stable income necessary to access capital financing for projects of this size.

The Company will continue to advance the project to a Bankable Feasibility Study. The near-term steps to accomplish this are discussed below:

Strategic Partner

In October 2017, Search secured a strategic partner with the investment from InCoR Holdings Inc. The recent completion of the pilot plant using the Search Proprietary Direct Extraction Metallurgical Process was instrumental for the due diligence of InCoR’s investment into Search. InCoR’s expertise in financing projects, especially with new technologies, will provide Search with a source of funding to further develop the district and seek offtake partners.

Developing the Critical Rare Earth Element District

Foxtrot Project

The FOXTROT Project is our key project for development based on a total indicated resource of 7.39 million tonnes and an inferred resource of 1.98 million tonnes, the Life of Mine Plan outlined in the PEA indicates that 4.9 million tonnes of material at an average grade of 0.98% Total Rare Earth Elements (“TREE”) could be mined over a 14-year period, including open pit mining for the first eight years and underground mining thereafter. Drilling indicates that the mineralization at Foxtrot is open at depth below the current resource and PEA Mine Plan. The Company has defined the current resource and additional drilling on Foxtrot would be required in the preparation of a bankable feasible study.

Deep Fox Project

An initial 53 channel samples taken at Deep Fox in 2014 were used to plan a much more extensive channel sampling program in 2015. A further 5 infill channels were completed in 2017 to support the drill program. Four extensions to existing channels have been started or planned to provide surface data for resource estimates in 2018. Including all three completed channeling programs, a total of 31 channels have been cut at the Deep Fox prospect and 1156 samples have been collected and analyzed; the 2018 channel program is in progress.

The Deep Fox channel program, the 2017 drilling, the 2018 drilling to date (11 holes) and the extensive mapping, sampling and geophysics, has allowed Search to be able to make the following observations:

- The geology and mineralization at Deep Fox is similar to FOXTROT
- At 500 metres, Deep Fox is similar to slightly longer in strike length than FOXTROT
- Mineralized zone widths are as wide or wider (up to 30m wide) compared to FOXTROT
- Mineralized channel sample assays and mineralized zone assays from three drill holes are on average greater than 15% higher than those at Foxtrot

Based on the positive channel sample program, along with the successful bench scale metallurgy test on the Deep Fox material, the Company commenced the Deep Fox drill program in November 2017 and continued it in July 2018. Three holes were completed and a fourth started before the 2017 drill program was suspended due to the onset of severe winter conditions and the seasonal holidays. The assay results from the first three drill holes provided the Company with positive results to justify completion of the 1500m balance of the Phase 1 2000m drill program in July 2018. A total of 14 holes and 2300 m have been drilled as of July 26th. Core is being sampled and assays are pending.

Upon completion of the current 1500m of drilling, it may be determined to complete a further 2000m program. With the additional drilling, Search could potentially define another mineral resource akin to FOXTROT, and thereby validating our District concept.

The Deep Fox prospect is easily accessed via a recently constructed (2017) 1.5 km bush road beginning near the St. Lewis Airport.

Environmental Assessment Notice from Federal and Provincial Agencies

Search has received notice from the Canadian Environmental Assessment Agency ("CEAA") and from the Province of Newfoundland and Labrador ("Province") for Search to provide an Environmental Impact Statement ("EIS"). Both CEAA and the Province, have provided draft guidelines required for the preparation of the EIS. Both agencies will work in concert to reduce duplication in the EIS process. The Company expects to initiate environmental base line studies as defined in the guidelines. The environmental base line studies will take place along with transparent and open communication with all stakeholders and interest groups in the submission of the EIS. This EIS preparation is another milestone in the development and permitting of the project.

Direct Extraction Process Refining

Search Minerals completed a successful pilot plant operation in June 2017 using the proprietary Direct Extraction Process at SGS Laboratories in Lakefield, Ontario. The pilot plant provided Search with a sample of a 99% high purity mixed rare earth oxide concentrate ("REO Concentrate") for further testing at separation facilities. The Company has been in continued discussion with various separation refineries whom have either tested the material or reviewed the technical information from the pilot plant.

In conjunction with processing the FOXTROT material during the pilot plant operation, a bench-top demonstration test of the Deep Fox mineral sample was also completed at SGS Laboratories in Lakefield, Ontario. The test highlights provided extractions of 90.8% Neodymium, 90.5% Praseodymium, 81.3% Dysprosium and 82.5% Terbium, which compare favorably with the extractions from the Foxtrot recent pilot plant studies.

The Company received funding from Atlantic Canada Opportunities Agency ("ACOA") and Research and Development Corporation of Newfoundland and Labrador ("RDC") for \$1,250,000 towards a budgeted pilot plant cost of \$1,900,000. The goals of the pilot plant, which were achieved, included:

- 1) Optimize the process
- 2) Demonstrate the process on a larger scale
- 3) Test new equipment
- 4) Produce product for refinery evaluation
- 5) Generate engineering design data for a feasibility study

On May 2, 2016, Search filed on www.sedar.com an updated Preliminary Economic Assessment ("PEA") which provided an initial capital cost of \$152M, with \$33M contingency, with after-tax IRR of 16.7% and after-tax payback of 4.4 years.

This PEA evaluates an open pit-underground scenario with lower capital costs, a lower mining rate and higher grade processing facility feed. The revised PEA was prepared by Roscoe Postle Associates Inc. ("RPA") and the results are being disclosed in accordance with National Instrument 43-101 ("NI 43-101"). It reconfirms that the Foxtrot Project has positive economics and the potential to become a profitable producer of Rare Earth Elements ("REE"), particularly Dy, Nd, Pr and Tb. The PEA's objective was to incorporate the Mineral Processing Engineering Study ("Study") prepared by SNC-Lavalin for the Company in June 2015.

The Study reports the estimated construction and operating costs for a REE mineralization treatment facility in SE Labrador that applies Search's proprietary process for treatment of REE mineralization from the Company's Foxtrot Deposit. The proprietary process is a direct leach on crushed material, thereby eliminating grinding, flotation, gravity and magnetic separation, and as a result produces waste that is a dry stackable inert residue, thereby eliminating the need for wet tailing ponds. Search has been able to reduce the initial capital costs as a smaller, yet profitable, scale operation. Management continues to review advancement in separation technology which could provide the same or lower separation pricing as existing proven solvent extraction processing.

The Company is looking for further pilot plant optimization based on the recommendations from SGS Canada. Also, Search is exploring the opportunity to build and operate a demonstration plant. This demonstration plant would provide Search with substantially more REO Concentrate for further refining and qualifications required to secure the end-users or an off-take agreement. Search would look to secure funding for the demonstration plant with a mixture of alternative financings, equity financings and sources of government assistance programs.

Current and future Rare Earth Element Market

There have been key government led initiatives which have positively impacted the forecasted growth within certain rare earth markets. The Foxtrot Project and potential Deep Fox prospect contain those rare earth elements deemed to be in short supply and high demand into the future such as neodymium (Nd), praseodymium (Pr), dysprosium (Dy), lanthanum (La) and terbium (Tb), which are key elements for the permanent magnet and other markets.

Ryan Castilloux published the Adamas Intelligence Report on December 2016, called "Rare Earth Market Outlook: Supply, Demand, and Pricing from 2016 through 2025" and stated "*The outlook for the rare earth demand from 2020 through 2025, and beyond, is exceptionally promising. This period reveals that for many of the today's most publicized rare earth end-uses, such as electric vehicles, wind turbines, and many others, the rate of annual demand growth is poised to rapidly accelerate from 2020 through 2025, steering global rare earth demand to unfathomable new heights. The future will be marked by strong demand growth for a number of rare earth elements, such as neodymium, praseodymium, dysprosium and lanthanum, and, consequently, will see prices of most rare earth products return to levels that sustain the profitability and growth of today's dominant producers, and incentivize continued investment in exploration and resource development globally.*"

Adamas Intelligence made the following comments in August 2017:

- "*Spot Nd/Pr oxide prices at 3-year highs, up +50% YTD on Chinese domestic market*"
- "*Prices up on rising demand, moderated supply, and a reduction in spot supplies*"
- "*Long-term offtake agreements are thinning availability of Nd/Pr on the spot market*"
- "*Adamas long term NdPr oxide price forecast remains unchanged, near term forecast increased*"
- "*Higher prices sooner will provide a boost for late-stage exploration projects*"

Management will continue to build market/investor awareness of Search with a view to broadening our shareholder base, improving liquidity and attracting equity investment for exploration and development programs.

MINERAL PROPERTIES

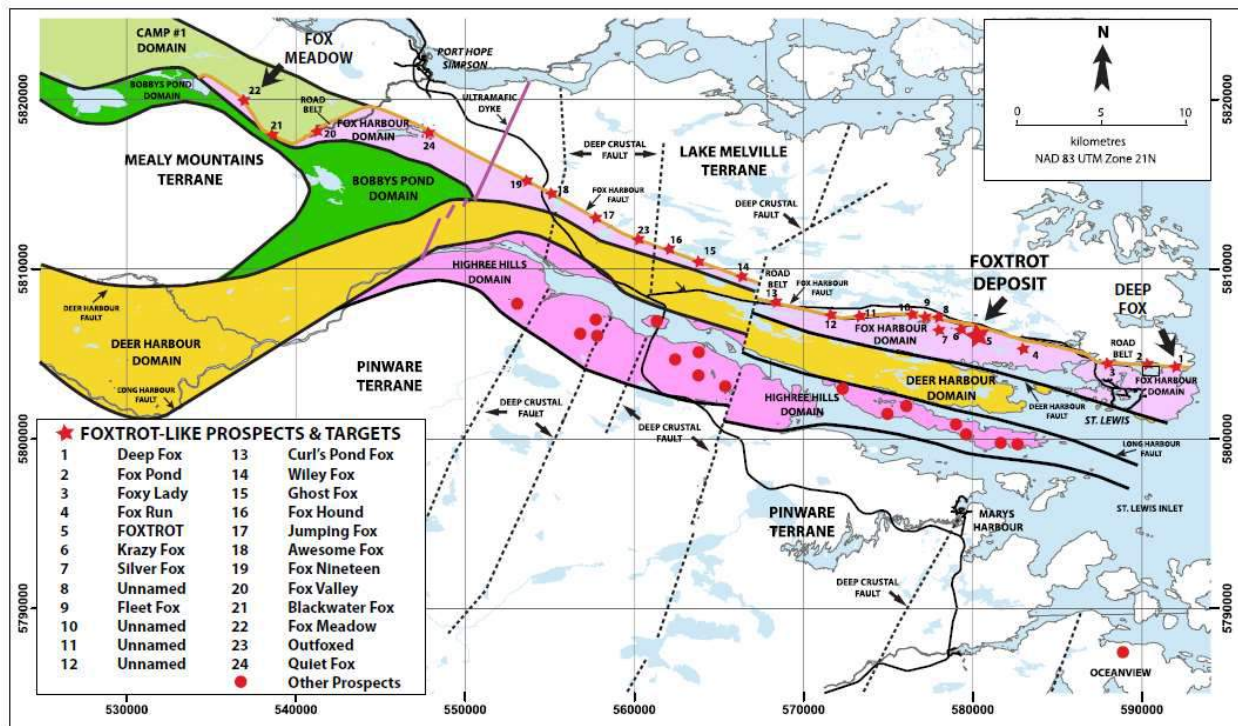

The rare earth elements ("REE") mentioned are defined as follows: La – Lanthanum, Ce – Cerium, Pr – Praseodymium, Nd – Neodymium, Pm – Promethium, Sm – Samarium, Eu – Europium, Gd – Gadolinium, Tb – Terbium, Dy – Dysprosium, Ho – Holmium, Er – Erbium, Tm – Thulium, Yb – Ytterbium, Lu – Lutetium and Y – Yttrium. Additional elements of interest are Zr – Zirconium and Nb – Niobium.

Although the Company has taken steps to verify title to mineral properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee a clear title. Property title may be subject to unregistered prior agreements and regulatory requirements. The Company is not aware of any disputed claims of title.

Port Hope Simpson REE District, Labrador

Search Minerals Inc. began exploring for Rare Earth Elements (“REE”) near the communities of St. Lewis and Port Hope Simpson in 2009. Early in the exploration cycle it became apparent that the company discovered NW trending Fox Harbour volcanic belt contained significant quantities of REE and had the potential to be a prolific District. The FOXTROT deposit, on which a favourable Preliminary Economic Assessment (“PEA”) now exists (updated in April 2016), was discovered in 2010 through systematic follow-up of coincident airborne radiometric/magnetic anomalies. More than 20 additional prospects were identified within a 70 km long and 8 km wide belt that is now controlled by Search.

Search controls a rapidly emerging Critical Rare Earth Element (“CREE”) District in SE Labrador that is road accessible and on/near tidewater. The FOXTROT Deposit was the first of three important discoveries. Based on surface expression, the other two, Deep Fox and Fox Meadow, appear to be at least as large as FOXTROT. Surface channel sample and 2017 drill core sample assays at Deep Fox yielded average grades at least 15% higher than channels at FOXTROT. Search has identified more than 20 other prospects in this highly accessible District and has developed a proprietary, scalable, hydrometallurgical process to optimize every opportunity to position as a competitive low-cost supplier of CREE well into the future. Search enjoys tremendous support from the Government of Canada and the Government of Newfoundland and Labrador, both of which have financially supported the development of our proprietary metallurgical process. In addition, Search personnel on the ground have built strong relationships with local communities and with the Nunatukavut Community Council who represent the local indigenous people. All of these factors will help to ensure that our project can be brought into production at relatively low capital and operating costs and in a timely manner.

Foxtrot Project

Based on a total indicated resource of 7.39 million tonnes and an inferred resource of 1.98 million tonnes, the Life of Mine Plan outlined in the PEA indicates that 4.9 million tonnes of material at an average grade of 0.98% Total Rare Earth Elements (“TREE”) could be mined over a 14-year period, including open pit mining for the first eight years and underground mining thereafter. Drilling indicates that the mineralization at Foxtrot is open at depth below the current resource and PEA Mine Plan.

On February 16, 2016, the Company announced the results of the updated PEA on its Foxtrot Project. The final NI 43-101 PEA was filed on www.sedar.com on May 2, 2016. The PEA evaluates an open pit-underground scenario with lower capital costs, a lower mining rate and higher grade processing facility feed. The revised PEA was prepared by Roscoe Postle Associates Inc. ("RPA"). It reconfirms the Foxtrot Project has positive economics and the potential to become a profitable producer of REE. Highlights of the PEA include:

- \$152 million initial capital cost – includes \$33 million contingency
- \$57 million underground mining capital (Year 8)
- \$23 million sustaining and closure capital
- \$1.713 billion total net revenue
- Net Present Value (10%) discount rate of \$93 million pre-tax and \$48 million after-tax
- Internal rate of return of 22.2% pre-tax and 16.7% after-tax
- Payback period of 3.5 years pre-tax and 4.4 years after-tax
- Undiscounted cash flow of \$327 million pre-tax and \$226 million after tax
- Mine life: 14 years: 8 years open pit, 6 years underground

The Mineral Processing Engineering Study from SNC-Lavalin (June 2015) along with the updated Foxtrot Mineral Resource (December 2015) was the basis of the PEA to ensure Search's proprietary metallurgy process would lead to significant cost savings in capital and operating costs. Search has been able to reduce the initial capital costs as a smaller, yet profitable, scale operation. The Foxtrot project supports low initial capital costs, a good IRR, a short payback period, and is scalable. A feature of the Foxtrot deposit geology allows Search to commence mining in mineralized material for early cash flow. The Processing Facility for this PEA would be located at the proposed Foxtrot mine site, however, further development in the District may determine that an alternative location may be more beneficial. The PEA outlines our current business model as Search continues to seek potential strategic and off take partners.

Deep Fox Prospect

(Formerly called the Deepwater Fox Prospect)

Deep Fox is located 12 km east of the Foxtrot deposit and became Search's second major discovery within the Fox Harbour volcanic belt (part of the Port Hope Simpson CREE District) following an initial channel sampling program during the 2014 field season. The Deep Fox prospect is located atop a hill, nearby the abandoned fishing community of Deepwater Creek.

The Deep Fox prospect is easily accessed via a recently constructed 1.5 km long bush road beginning near the St. Lewis Airport. The 53 initial channel samples taken at Deep Fox were used to plan a much more extensive channel sampling program in 2015 in which 25 channels were sampled. A further 5 infill channels were completed in 2017 and four channel extensions began in 2018 to support the drill program. Including all three completed channeling programs, a total of 31 channels have been cut at the Deep Fox prospect and 1156 samples have been collected and analyzed.

The Deep Fox channel program and the extensive mapping, sampling and geophysics, has allowed Search to be able to make the following observations:

- The geology and mineralization at Deep Fox is the similar to FOXTROT
- At 500 metres, Deep Fox is similar to slightly longer in strike length than FOXTROT
- Mineralized zone widths are as wide or wider (up to 30m wide) compared to FOXTROT
- Mineralized channel sample assays and mineralized zone assays from three drill holes are on average greater than 15% higher than those at Foxtrot

This is an exciting discovery in an excellent location and is Search's next target for an extensive exploration drilling program; this program will provide data for a second resource in the district. If resources are delineated here they would be close enough to the proposed FOXTROT mine development to provide additional feed to either extend the life of the overall operation or to facilitate a scaling-up for greater operational economies.

Ten drill holes have been completed to date (three in 2017 and seven in 2018) with geological and geophysical parameters indicating that mineralization, similar to that observed and assayed in surface channels (see Search Minerals news releases Nov. 27th, 2017, Jan. 27th, 2017 and Oct. 15th, 2015), occurs in each of the drill holes. Geological logging, sampling and other data acquisition are in progress; geochemical assays, required to determine the grade of mineralization, will be available in September, 2018.

The geological model developed for the Foxtrot deposit (see Search Minerals Foxtrot PEA, April 28th, 2016) indicates that mineralization observed on surface also occurs at intersection depths (vertically below the surface) of at least 400m (mineralization is open at depth). At Foxtrot the mineralization, both higher and lower grades, dips at 70-90° towards the north and extends continuously from the surface to the deepest intersection; specific geological units can be followed from the surface to each progressively deeper drill hole.

Like the Foxtrot Deposit, the Deep Fox REE prospect occurs in the Fox Harbour volcanic belt, is hosted by peralkaline felsic volcanic rocks and dips 70-90° towards the north. Ten drill holes at Deep Fox, three with assays (2017) and seven currently without assays, indicate high CREE grades and significant widths both underground and on surface. These are similar to or higher than found at Foxtrot.

Assay highlights: (see March 5, 2018 news release for additional details)

FD-17-02: 1231 ppm Y, 1852 ppm Nd, 512 ppm Pr, 41.3 ppm Tb and 241 ppm Dy over 14.13m (true width);
FD-17-03: 1321 ppm Y, 1911 ppm Nd, 530 ppm Pr, 41.1 ppm Tb and 241 ppm Dy over 8.04m (true width)

The assay and logging results from the ten drill holes, taken from 50 m and 100 m intersection depths, are very similar to those obtained from surface channels at Deep Fox (Search Minerals news releases Jan. 27th, 2015, Oct. 15th 2015 and Nov. 27th, 2017). Assay results from both drill core and channels at Deep Fox are very similar to, or slightly higher than, those at Foxtrot (Technical Ni-43-101 Report: Technical Report On The Foxtrot Project, Newfoundland & Labrador, Canada, April, 28, 2016). Geological mapping and core/channel logging indicate that the host peralkaline rhyolites and trachytes (commendite and pantellerite) to the CREE mineralization at Deep Fox and Foxtrot are the same.

The Deep Fox Prospect occurs about 2 km NE of the port of St. Lewis on the SE Labrador coast and within 12 km of the Foxtrot Deposit. The prospect is accessible by an all-weather gravel road and a newly constructed bush road.

Fox Meadow Prospect

The Fox Meadow discovery is located 11km west of Port Hope Simpson and 1km southeast of a graveled forest access road, which extends southwestward from the Trans Labrador Highway. Mineralization coincides with a magnetic anomaly approximately 1km long and 250m wide. Geological mapping and channel sampling indicate that the mineralization occurs in two bands. The northerly band was initially sampled by four sections of channels that indicate a width of the mineralized zone of at least 30m and a strike length of 425m; high grade mineralization in channels is up to 8m wide. Outcrop mapping in 2016 extended the mineralized zone by an additional 200m.

The observed surface dimensions of higher-grade mineralization at Fox Meadow are similar to the Foxtrot Deposit (10-14m wide and 400m long) and Deep Fox Prospect (up to 34m wide and 500m long). CREE channel sample assays from Fox Meadow are similar to those at Deep Fox and FOXTROT, affirming that Fox Meadow is the third FOXTROT-like mineralized zone in the District.

Red Wine Property, Labrador

On June 28, 2015, the Company purchased from Great Western Minerals Group Ltd. ("GWMG") its interest in the Red Wine Property for \$20,000. GWMG had acquired its approximate 50% interest in the Red Wine Property pursuant to an option agreement between the Company and GWMG dated July 23, 2010. Following the acquisition, the Company now owns 100% of the Red Wine Property. Although the Company has written-down costs for accounting purposes, the Company still holds the Red Wine Property. The Red Wine property is located approximately 100km north-east of Churchill Falls, Labrador. The majority of these claims do not require any funding

until the year 2022, at which time, depending on the rare earth element market, Search can decide whether to continue work on this property.

NunatuKavut Community Council

On August 27, 2012, as amended on November 13, 2014, the Company entered into a Mining Exploration Activities Agreement with the NunatuKavut Community Council (the “NunatuKavut”), the political representative body of the Inuit of South-Central Labrador. The agreement solidifies a relationship that has evolved through the Company’s activity in and around NunatuKavut communities on the south coast. The agreement sets out a respectful way forward, meeting the interests of and ensuring mutual benefit for both parties. Key elements in the agreement address environmental protocols and safeguards for matters of historic value. The agreement also sets out hiring and business opportunities for NunatuKavut members and communities as well as certain financial considerations. The agreement will continue indefinitely unless one or both parties elect to terminate.

RESULTS OF OPERATIONS

The Company had a loss of \$713,772 (\$0.00 per share) for the six months ended May 31, 2018 as compared to a loss of \$534,491 (\$0.00 per share) for the six months ended May 31, 2017. The table below details certain non-cash or unusual transactions that for the purposes of this discussion have been adjusted out of the reported loss to produce an adjusted loss that forms a better basis for comparing the period over period operating results of the Company.

	2018 (\$)	2017 (\$)
Loss for the period as reported	(713,772)	(534,491)
Add (deduct):		
Amortization	3,167	3,779
Accretion of convertible debenture	18,660	3,075
Share-based compensation – stock options	271,627	9,658
Adjusted loss for the period ⁽¹⁾	(420,318)	(517,979)

⁽¹⁾ Adjusted loss for the period is not a term recognized under IFRS.

- Accretion of convertible debentures represents the accounting entry required to bring the book value of the convertible debentures up to their face value at maturity. This accretion expense represents the additional interest expense that would have been required had the convertible debentures not had a conversion feature.
- The Company granted 5,150,000 stock options during the 2018 period which vested on the date of grant.

The decrease in the adjusted loss for the six months ended May 31, 2018 compared to the six months ended May 31, 2017 is the net result of a number of differences in various expenses as follows:

- Accounting and audit fees of \$25,787 (2017: \$22,093) are comprised of fees to maintain the accounting records and prepare financial reports as required.
- Administration expense and management fees of \$147,242 (2017: \$174,441) are comprised of fees paid to executive management of the company as well as administrative staff.
- Consulting fees of \$nil (2017: \$76,011) included consulting fees paid to the VP of Metallurgy as well as consulting fees paid to a group assisting the company with strategic investors and off-take agreements. The decrease in the current period is due to consulting fees paid to the VP of Metallurgy being allocated to the Foxtrot Project as metallurgical consulting.
- Legal fees of \$81,897 (2017: \$27,513) are general legal fees to comply with various regulations and general business requirements.
- Office and miscellaneous expenses of \$24,520 (2017: \$42,946) includes insurance and other miscellaneous expenses.
- Regulatory and transfer agent fees of \$29,446 (2017: \$18,171) are fees paid to maintain the listing on the TSX-V.

- Share-based compensation of \$271,627 (2017: \$9,658) is based on granting 5,150,000 stock options to directors, officers, consultants and employees.
- Shareholder and investor relations expense of \$10,176 (2017: \$67,272) are fees incurred to market the Company current and potential investors. A \$72,000 per annum investor relations contract expired on August 31, 2017.
- Travel and accommodation expenses of \$4,466 (2017: \$38,600) includes executive travel to the properties in Newfoundland as well as travel for investor relations purposes.

QUARTERLY INFORMATION

The following is selected financial data from the Company's unaudited quarterly financial statements for the last eight quarters ending with the most recently completed quarter, being the three months ended May 31, 2018.

	Three Months Ended (\$)			
	May 31, 2018	Feb 28, 2018	Nov 30, 2017	Aug 31, 2017
Total Revenues	-	-	-	-
Income (Loss)	(219,115)	(494,657)	(145,736)	(205,330)
Income (Loss) Per Share (basic and diluted) ⁽¹⁾	(0.00)	(0.00)	(0.00)	(0.00)
Total Assets	10,941,056	10,967,566	11,082,621	10,439,349
Total Liabilities	1,701,509	1,514,169	1,432,929	842,652
Shareholders' Equity	9,239,547	9,453,397	9,649,692	9,596,697

	Three Months Ended (\$)			
	May 31, 2017	Feb 28, 2017	Nov 30, 2016	Aug 31, 2016
Total Revenues	-	-	-	-
Income (Loss)	(247,908)	(286,583)	126,391	(164,034)
Income (Loss) Per Share (basic and diluted) ⁽¹⁾	(0.00)	(0.00)	0.00	(0.00)
Total Assets	10,489,738	10,653,272	10,442,455	9,818,943
Total Liabilities	689,350	1,060,878	570,998	1,004,048
Shareholders' Equity	9,800,388	9,592,394	9,871,457	8,814,895

⁽¹⁾ The basic and diluted calculations result in the same values. The income recorded for the three months ended November 30, 2016 was from a \$385,134 gain on debt settlement.

FINANCING ACTIVITIES

During the six months ended May 31, 2018, the Company completed financings as follows:

- On December 11, 2017, the Company completed the second and final tranche of its non-brokered private placement raising gross proceeds of \$40,000 by the issuance of 800,000 flow-through shares at \$0.05 per flow through share.
- On March 14, 2018 and April 11, 2018, the Company received loans in the aggregate amount of \$100,000 from InCoR Holdings Plc. The loans bear no interest and are repayable on demand. The InCoR loans were repaid with proceeds from the subsequent financings (see below).
- The Company received government assistance of \$83,722.

Subsequent to May 31, 2018, the Company completed three financings as follows:

1. Rights Offering of Units

On July 5, 2018, the Company completed a Rights Offering of 15,609,285 units ("Units") at a price of \$0.04 per Unit for gross proceeds of \$624,372. Each unit is comprised of one common share and one share purchase

warrant. Each whole warrant entitles the holder thereof to purchase an additional common share of the Company at \$0.07 per common share up to July 5, 2020.

In connection with the Rights Offering, the Company entered into a standby guarantee agreement (the "Standby Guarantee") with InCoR. Under the Standby Guarantee, InCoR agreed to subscribe for all Units that were not otherwise purchased by the Company's shareholders, up to the amount of \$624,372. As compensation for providing the Standby Guarantee, the Company granted InCoR 3,140,988 share purchase warrants. The share purchase warrants are exercisable at a price of \$0.07 per common share up to July 5, 2023.

2. *Private Placement of Units*

On July 11, 2018, the Company completed a private placement of 4,887,536 units at a price of \$0.05 per unit for gross proceeds of \$244,377. Each unit is comprised of one common share and one share purchase warrant. Each whole warrant entitles the holder thereof to purchase an additional common share of the Company at \$0.07 per common share up to July 12, 2020.

3. *Flow-Through Private Placement of Units*

On July 11, 2018, the Company completed a flow-through private placement of 3,000,000 units at a price of \$0.06 per flow-through unit for gross proceeds of \$180,000. Each unit is comprised of one common share and one share purchase warrant. Each whole warrant entitles the holder thereof to purchase an additional common share of the Company at \$0.07 per common share up to July 12, 2020.

LIQUIDITY AND CAPITAL RESOURCES

As at May 31, 2018, the Company's cash balance was \$45,187 with a working capital deficiency of \$1,551,051.

The Company's operations consumed \$406,068 of cash, before working capital items, during the six months ended May 31, 2018 (2017: \$517,979) with an additional \$336,772 (2017: \$1,286,051) utilized on mineral property acquisition costs, deferred exploration expenditures, and equipment acquisition costs. The cash requirement for the six months ended May 31, 2018 was fulfilled from cash on hand at the beginning of the period, \$83,722 of government assistance, \$100,000 from loans, and \$40,000 from completing a flow-through financing.

The Company's aggregate operating, investing and financing activities during the six months ended May 31, 2018 resulted in a net decrease in its cash balance from \$293,508 at November 30, 2017 to \$45,187 at May 31, 2018. The Company's working capital decreased by \$625,884 correspondingly during the period and stood at a deficiency of \$1,551,051 at May 31, 2018. The Company has accumulated losses since inception of \$17,036,060.

The InCoR Convertible Debentures with a principal balance of \$500,000 are due in September/October 2018. The December 2016 Convertible Debenture with a principal balance of \$120,750 was due on March 31, 2018. On July 3, 2018, the 2016 Convertible Debenture of \$120,750 was repaid in cash.

The Company does not have any commitments for material capital expenditures over the near term or long term other than a \$10,000 annual payment to the vendors of the Quinlan Property and the building lease of \$7,000 per month expiring December 31, 2022.

The Company has not put into commercial production any of its mineral properties and as such has no operating revenues or cash flows. Accordingly, the Company is dependent on the equity markets as its sole source of operating working capital, and the Company's capital resources are largely determined by the strength of the junior resource capital markets and by the status of the Company's projects in relation to these markets, and its ability to compete for investor support of its projects. Since the Company will likely not have cash flows from operations over the next year, it will have to continue to rely upon equity and debt financing during such period. There can be no assurance that financing, whether debt or equity, will always be available to the Company in the amount required at any particular time or for any particular period or, if available, that it can be obtained on terms satisfactory to it.

GOING CONCERN

The condensed interim consolidated financial statements have been prepared on a going concern basis, which assumes that the Company will be able to meet its obligations and continue its operations for the foreseeable future. Realization values may be substantially different from carrying values as shown and these financial statements do not give effect to adjustments that would be necessary to the carrying values and classification of assets and liabilities should the Company be unable to continue as a going concern. Such adjustments could be material.

The business of mining and exploring for minerals involves a high degree of risk and there can be no assurance that current operations, including exploration programs, will result in profitable mining operations. The recoverability of the carrying value of exploration and development properties and the Company's continued existence is dependent upon the preservation of its interest in the underlying properties, the discovery of economically recoverable reserves, the achievement of profitable operations, the ability of the Company to raise additional financing, if necessary, or alternatively upon the Company's ability to dispose of its interests on an advantageous basis. Changes in future conditions could require material write-downs of the carrying values.

At May 31, 2018, the Company had not yet achieved profitable operations, had a working capital deficiency of \$1,551,051, had an accumulated deficit of \$17,011,060 since inception and expects to incur further losses in the development of its business. In particular, the Company requires additional funds in order to meet planned 2018 objectives, including the drilling of the Deep Fox prospect. Management is in the process of obtaining additional financial resources and believes sufficient resources will be available as required. Although the Company has been successful in the past in obtaining financing, there is no assurance that it will be able to obtain adequate financing in the future or that such financing will be on terms advantageous to the Company. The above factors may cast significant doubt upon the Company's ability to continue as a going concern and, therefore, it may be unable to realize its assets and discharge its liabilities in the normal course of business.

TRANSACTIONS WITH RELATED PARTIES

During the three and six months ended May 31, 2018 and 2017, the Company incurred the following expenditures charged by directors and officers of the Company, or former directors and officers of the Company, and/or companies they owned or were significant shareholders of:

	Three months ended May 31,		Six months ended May 31,	
	2018	2017	2018	2017
	\$	\$	\$	\$
Administration and management fees ⁽¹⁾	45,000	63,750	145,000	172,500
Consulting fees ⁽²⁾	-	22,500	-	45,000
Non-executive directors fees	13,500	18,000	30,000	34,500
Mineral property expenditures				
Geological consulting, salaries, wages and benefits ⁽³⁾	32,500	32,500	65,000	64,999
Metallurgical consulting ⁽²⁾	22,500	-	70,000	-
Rent	21,000	21,000	42,000	42,000
Share-based compensation	-	-	212,147	-
	134,500	157,750	564,147	358,999

⁽¹⁾ Includes salary earned by the former Chairman of the Board and fees billed by the CEO, Greg Andrews. The business purpose of the transactions was to compensate the individuals for administration and management services provided. The Company has an employment contract with Greg Andrews that includes a termination clause and a change of control provision calling for lump sum payments.

⁽²⁾ Includes fees billed by the VP of Metallurgy, Dr. David Dreisinger. The business purpose of the transactions was to compensate Dr. David Dreisinger for assisting with metallurgical work relating to the Company's REE properties. The Company has a consulting agreement with Dr. David Dreisinger. The agreement includes a termination notice period of 180 days.

- (3) Includes fees billed by the VP of Exploration, Dr. Randy Miller. The business purpose of the transactions was to compensate Dr. Randy Miller for managing the mineral properties.

At May 31, 2018, due to related parties of \$561,530 (November 30, 2017: \$419,031) included amounts owing to directors and officers of the Company and/or companies they control or of which they were significant shareholders. The amounts owing include amounts related to expenditures charged to the Company and for reimbursements of expenditures paid for on behalf of the Company. The amounts owing are unsecured and non-interest bearing. Amounts are due on demand or due contingent on future events. The amounts have been recorded at their exchange amount, being the amount agreed to by the parties.

Key management includes the CEO, VP of Metallurgy, VP of Exploration and the directors of the Company. The compensation paid or payable to key management for services during the three and six months ended May 31, 2018 and 2017 is as follows:

	Three months ended May 31,		Six months ended May 31,	
	2018	2017	2018	2017
	\$	\$	\$	\$
Short-term benefits	113,500	136,750	310,000	316,999
Share-based compensation	-	-	212,147	-
	113,500	136,750	522,147	316,999

FINANCIAL INSTRUMENTS

Designation of Financial Instruments

The Company's financial instruments consist of cash, receivables, accounts payable and accrued liabilities, due to related parties, convertible debentures and loans. The Company designated its cash and receivables as loans and receivables, which are measured at amortized cost. Accounts payable and accrued liabilities, due to related parties, convertible debentures and loans are designated as other financial liabilities, which are measured at amortized cost.

Discussions of risks associated with financial assets and liabilities are detailed below:

Credit Risk

Credit risk arises from cash held with banks and financial institutions. The maximum exposure to credit risk is equal to the carrying value of the financial assets. The Company's cash is held with a large Canadian bank.

Commodity Price Risk

The Company's ability to raise capital to fund exploration or development activities is subject to risks associated with fluctuations in the market price of minerals under exploration.

Liquidity Risk

Liquidity risk is the risk that the Company will not have sufficient funds to meet its financial obligations when they are due. The Company manages liquidity risk by maintaining sufficient cash and cash equivalent balances to enable settlement of transactions on the due date. Management monitors the Company's contractual obligations and other expenses to ensure adequate liquidity is maintained. Refer to the going concern note for additional disclosure. The Company had working capital (deficiency) as follows:

	May 31, 2018	November 30, 2017
	\$	\$
Current assets	62,743	410,047
Current liabilities	(1,613,794)	(1,335,214)
Working capital (deficiency)	(1,551,051)	(925,167)

Market Risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk and price risk.

a) Currency Risk

As at May 31, 2018, all of the Company's cash was held in Canadian dollars, the Company's functional currency. The Company has no operations in foreign jurisdictions outside of Canada at this time and as such has no currency risk associated with its operations. The Company has had nominal amounts of payables in US dollars.

b) Interest Rate Risk

As at May 31, 2018, the Company had convertible debentures bearing interest at fixed rates from 10%-15% per annum. As the Company had no variable rate interest bearing financial instruments, the Company is not exposed to interest rate risk.

c) Price Risk

Price risk is the risk that the fair value of a financial instrument will fluctuate because of changes in market prices. The Company has no financial instruments subject to price risk.

OUTSTANDING SHARE CAPITAL

Authorized: Unlimited number of common shares

Issued and outstanding: 179,589,678 common shares as at July 26, 2018.

Options and warrants outstanding as at July 26, 2018

Security	Number	Exercise Price	Expiry Date
Stock Options	100,000	\$0.07	October 29, 2018
Stock Options	500,000	\$0.10	April 18, 2019
Stock Options	6,850,000	\$0.10	June 30, 2020
Stock Options	5,150,000	\$0.08	August 14, 2021
TOTAL	12,600,000		

Security	Number	Exercise Price	Expiry Date
Share Purchase Warrants	15,609,285	\$0.07	July 5, 2020
Share Purchase Warrants	7,887,536	\$0.07	July 12, 2020
Share Purchase Warrants	3,140,988	\$0.07	July 5, 2023
TOTAL	26,637,809		

Security	Number	Exercise Price	Expiry Date
Convertible debenture	2,500,000	⁽¹⁾ \$0.06	September 28, 2018
Convertible debenture	5,833,333	⁽¹⁾ \$0.06	October 27, 2018
TOTAL	8,333,333		

- ⁽¹⁾ The Company has a convertible debenture of \$500,000 outstanding that is exercisable into 8,333,333 units. Each unit will be comprised of one common share and one share purchase warrant with each warrant entitling the holder thereof to purchase an additional common share of the Company at \$0.07 per common share for up to five years from the date of issuance of the debenture.

DISCLOSURE CONTROLS AND PROCEDURES

In connection with National Instrument 52-109 (Certificate of Disclosure in Issuer's Annual and Interim Filings) ("NI 52-109"), the Chief Executive Officer and Chief Financial Officer of the Company have filed a Venture Issuer Basic Certificate with respect to the financial information contained in the unaudited condensed interim consolidated financial statements for the six months ended May 31, 2018 and this accompanying MD&A (together, the "Interim Filings").

In contrast to the full certificate under NI 52-109, the Venture Issuer Basic Certificate does not include representations relating to the establishment and maintenance of disclosure controls and procedures and internal control over financial reporting, as defined in NI 52-109. For further information the reader should refer to the Venture Issuer Basic Certificates filed by the Company with the Interim Filings on SEDAR at www.sedar.com.

RISKS AND UNCERTAINTIES

The exploration and development of mineral deposits involves significant risks which even a combination of careful evaluation, experience and knowledge may not be successful in overcoming. Few mineral properties which are explored ultimately develop into producing mines. There has been no commercial production of minerals on properties held by the Company to date and there is a high degree of risk that commercial production of minerals will not be achieved.

Locating mineral deposits depends on a number of factors, not the least of which is the technical skill of the exploration personnel involved. The mining industry is intensely competitive. The commercial viability of a mineral deposit depends on a number of factors including the particular attributes of the deposits (principally size and grade), proximity to infrastructure, the impact of mine development on the environment, environmental regulations imposed by various levels of government and the competitive nature of the industry which causes mineral prices to fluctuate substantially over short periods of time. There can be no assurance that the minerals can be marketed profitably or in such a manner as to provide an adequate return on invested capital.

The operations of the Company are subject to all of the risks normally associated with the operation and development of mineral properties and the development of a mine, including encountering unexpected formations or pressures, caving, flooding, fires and other hazards, all of which could result in personal injuries, loss of life and damage to property of the Company and others. In accordance with customary industry practice, the Company is not fully insured against all of these risks, nor are all such risks insurable.

The operations of the Company's properties will be subject to various laws and regulations relating to the environment, prospecting, development, production, waste disposal and other matters. Amendments to current laws and regulations governing activities related to the Company's mineral properties may have material adverse impact on operations.

The Company will need additional funding to complete its long term objectives. The ability of the Company to raise such financing in the future will depend on the prevailing market conditions, competition with other strategic metals exploration stage companies, as well as the business performance of the Company. There can be no assurances that the Company will be successful in its efforts to raise additional financing on terms satisfactory to the Company. If

adequate funds are not available or not available on acceptable terms, the Company may not be able to take advantage of opportunities, to develop new projects or to otherwise respond to competitive pressures.

The Company's working capital and liquidity fluctuate in proportion to its ongoing equity financing activities. The Company requires a certain amount of liquid capital in order to sustain its operations and in order to meet various obligations as specified under its resource property acquisition agreements. Should the Company fail to obtain future equity financing due to reasons as described above, it will not be able to meet these obligations and may lose its interests in the properties covered by the agreements. Further, should the Company be unable to obtain sufficient equity financing for working capital, it may be unable to meet its ongoing operational commitments.

All industries, including the mining industry, are subject to legal claims, with and without merit. The Company may become involved in legal disputes in the future. Defense and settlement costs can be substantial, even with respect to claims that have no merit. Due to the inherent uncertainty of the litigation process, there can be no assurance that the solution of any particular legal proceeding will not have a material adverse effect on the Company's financial position or results of operations.

All of the Company's mineral properties are in the exploration stage. Exploration and development of natural resources involve substantial expenditures and a high degree of risk. Few properties that are explored are ultimately developed into producing properties. Accordingly, the Company has no material revenue, writes off its mineral properties from time to time, and operates at a loss. Continued operations are dependent upon ongoing equity financing activities.

OTHER INFORMATION

Additional information related to the Company is available for viewing on SEDAR at www.sedar.com and at the Company's website at <http://www.searchminerals.ca>.

QUALIFIED PERSONS:

Dr. David Dreisinger, Ph.D., P.Eng., is the Company's Vice President, Metallurgy and Qualified Person for the purposes of NI 43-101. Dr. Dreisinger has reviewed and approved the technical disclosure contained herein as applicable.

Dr. Randy Miller, Ph.D., P.Geo, is the Company's Vice President, Exploration, and Qualified Person (as defined by National Instrument 43-101) who has supervised the preparation of and approved the technical information reported herein as applicable. The company will endeavour to meet high standards of integrity, transparency, and consistency in reporting technical content, including geological and assay (e.g., REE) data.
